

Man and Woman, a Study of Human Secondary Sexual Characters (Classic Reprint)

About twelve years ago, for my own instruction, I began to collect definite data concerning the constitutional differences between men and women. I was moved to do this because I realised that such differences lie at the root of many social questions in which I took great interest, and I knew of no true and unprejudiced statement of the precise facts. I have continued to collect, sift, and ponder over my data for some years after I had satisfied myself personally as to their general significance and drift, because I believe that there are many men and women who are in the same position as I was twelve years ago, and who will welcome this book as I should have welcomed it at that time. When I look into newspapers and magazines, and observe the reckless or ignorant statements that are still made regarding these matters, I am strengthened in my belief. To the best of my ability I have here presented an anthropological and psychological study of those secondary sexual differences which recent investigation has shown to exist among civilised human races.
